Precast Walling System

Privacy Walls Worth Looking At

Beauty in the Look, Price and Delivery

The Verti-Crete Walling System

The Verti-Crete Walling System provides an attractive alternative to traditional architectural wall construction. Verti-Crete Walling is the perfect decorative wall solution for any residential or commercial development, from a one off decorative walling structure to a complete housing scheme boundary wall solution to a large scale road side walling project.

The Verti-Crete Walling System provides a double faced natural stone look. The Verti -Crete Walling texture was specifically designed to blend in with typical housing landscapes.

Unbeatable Cost Savings

Due to the significantly reduced labour and equipment requirement provided by our precast solution, the Verti-Crete Walling system offers huge savings compared to the traditionally built architectural walls.

Faster installation, reduced material storage, longer lifespan and minimum maintenance or repairs makes the Verti -Crete Walling system the most cost effective high quality natural stone effect offering on the market.

Architecturally Appealing

Keeping in mind that our walling system is designed to replace the traditional methods used for the construction of walls, Verti-Crete Ireland have designed a stylish yet robust, hard wearing precast walling system with the look and texture of natural stone. Our solution is designed to be flexible to the architectural needs of the domestic residential schemes as well as large areas such as roadside walling projects.

The realistic masonry pattern has been moulded from the actual Stones and masonry techniques they represent and creates a consistency in a large scale wall project that no other product can offer.

Many residential developments prefer a combination of solid walls and railings. Our Verti-Crete Walling system can be combined with the installation

of railings to enhance the decorative landscaping.

The solid wall option is the ideal solution for a boundary wall, offering protection yet giving a tasteful traditional wall effect on both faces of the panels.

- Privacy Fences
- Sound Walls
- Earth Retaining Walls
- Pillars

Standard Dimensions

Panels

- 1.2 x 4 metre
- 1.8 x 4 metre
- 2.4 x 4 metre

Columns

- 500mm x 500mm diameter

Speed of Construction

The rapid installation process allows for reduced and measured time benefits as well as substantial cost savings. A small installation team assisted by an excavator can comfortably prepare the ground work for up to 100m of walling on day one of a project.

The Verti-Crete Walling system requires only isolated pad footings at the piers, minimising groundwork required.

After the concrete pads have set, the installation team can install up to 200m of pillars and piered wall panels in a day.

Robust Construction

Each robust, hard wearing precast panel is steel reinforced providing a 100 year + lifespan.

Each element is tough enough not to be affected by denting, corrosion or fading from UV damage, harsh weather and seasonal climate changes.

Range of Sizes Available

The precast wall panels are available in a range of heights from 0.6m to 2.5m. The panels are available as full height solid walling, providing a protective barrier or a tasteful combination of walling and railing for a classical visual effect. The precast pillars are designed to create a seamless structure.

Variety of Uses

Privacy Walling: Getting an attractive and affordable stone privacy wall used to be a trade-off. The expense of custom masonry or rockwork can be prohibitive to many, while affordable alternatives like vinyl fencing, wood or chain link don't deliver the durability or desired appearance.

Public/Commercial Utilites: Verti-Crete Walling offers very cost-effective long-term value to publicly funded projects. Our walling systems are the ideal solution for high volume perimeter walling for electrical substations, water treatment plants, sewage treatment and other facilities. The safety benefits, durability, and aesthetics of the properties perimeter will be enhanced and secure for a lifetime with little or no maintenance required.

Verti-Crete Walling System Benefits

- Unbeatable Cost Savings
- Speed of Construction
- Robust Construction
- Architecturally Appealing
